## Experience

---

### Atlassian

July 2025 – Present

*Software Engineer*

*San Francisco, CA*

- Cut regulated-cloud (FedRAMP) service onboarding by 83% — from 60 to under 10 developer-days — and delivered 3 services in 3 business days by co-developing an LLM-based AI-agent automation pilot; adopted org-wide as the default onboarding workflow and packaged into a reusable module.
- Drove adoption of a centralized environment-configuration platform across an 80GB+ frontend monorepo powering enterprise SaaS products used by millions; authored and merged 125+ pull requests consolidating scattered, error-prone checks onto a shared SDK to establish a single source of truth.
- Designed and built a Java backend SDK adopted across multiple services, giving them one consistent interface for environment-aware decisions and automating releases through built-in CI/CD pipelines and version management.
- Accelerated go-live for government and enterprise customers on a FedRAMP-compliant cloud platform, provisioning production and staging environments and resolving onboarding tickets across SSO/IdP integration, domain verification, and org-admin setup.

### Atlassian

May 2024 – Aug. 2024

*Software Engineering Intern*

*New York, NY*

- Owned an end-to-end feature from design through implementation, testing, and rollout: a CLI-driven automation for cleaning up Bring Your Own Key (BYOK) encryption policies that eliminated a costly manual process.
- Reclaimed infrastructure spend on RDS databases costing up to \$14K per month by automating deletion of stale encryption policies across test environments.
- Designed and implemented a RESTful API in Kotlin and Spring Boot for policy retrieval and deletion, backed by a Go command-line tool and unit and acceptance tests.

### Sherwin Williams

Mar. 2023 – Aug. 2023

*Digital Technology Intern/Co-op*

*Cleveland, OH*

- Built a dynamic Tableau workbook analyzing the company's entire Tableau Server content — hundreds of dashboards and datasets — to deliver enterprise-wide usage insights.
- Consolidated BI tool documentation and tutorials into a centralized SharePoint hub, streamlining onboarding for the Enterprise Data Organization; worked across Python, SQL, Snowflake, Tableau, MicroStrategy, and Dataiku.

## Projects

---

### Little Lemon Web Application

- Built a full-stack restaurant table-booking application with Django, JavaScript, HTML/CSS, and a MySQL backend, including user registration and authentication.
- Designed Django models and RESTful API endpoints to handle form submissions and dynamically update the database, applying MVC architecture and REST principles.

### Project NeRF

- Helped build an application that simplifies Neural Radiance Fields (NeRF) to create realistic 3D renders from smartphone photos.
- Implemented Docker containers to streamline setup and built the project API with Flask and MongoDB.

## Education

---

### Rensselaer Polytechnic Institute

Troy, NY

*Master of Science in Business Analytics*

*Aug. 2024 – May 2025*

*Bachelor of Science in Computer Science and Economics*

*Aug. 2020 – May 2024*

## Certifications
